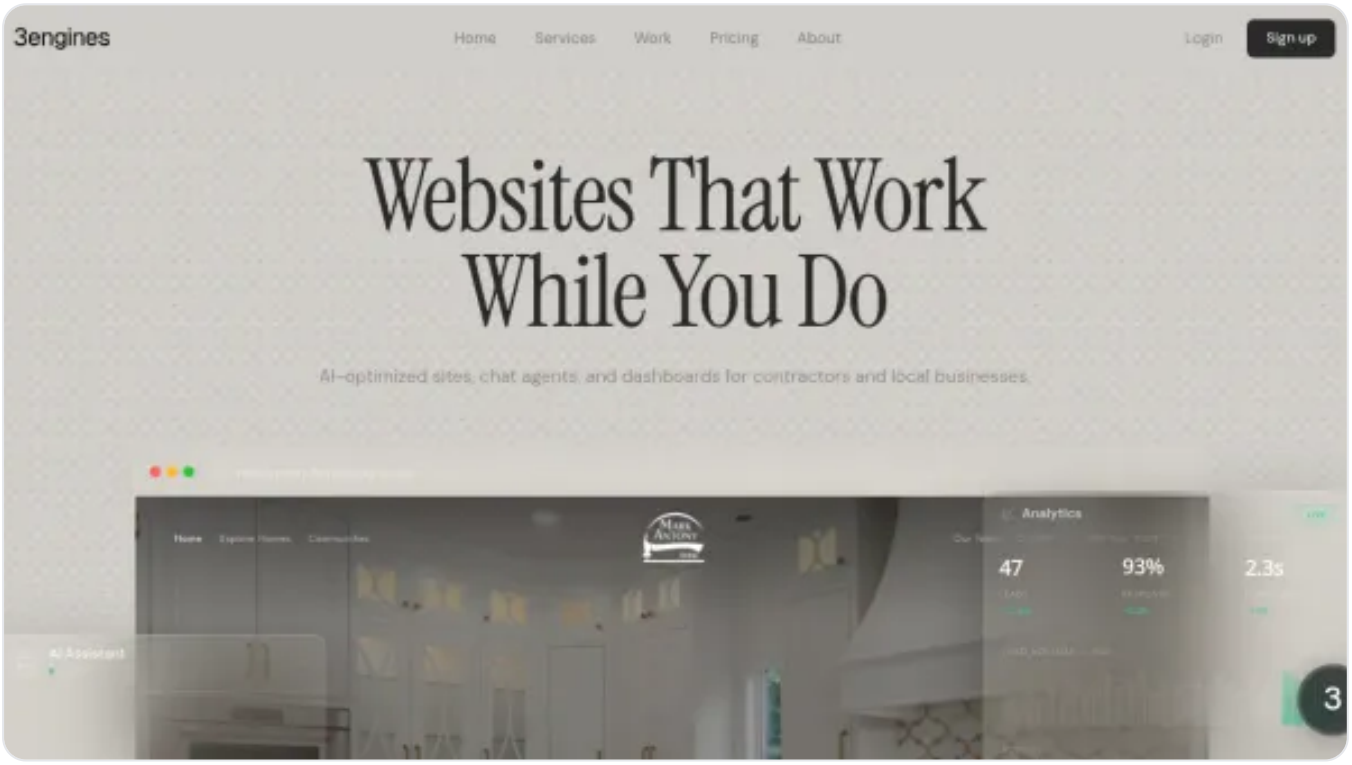
3engines

AI-optimized websites, chat agents, and dashboards for contractors and local businesses.



About

3engines is an AI-optimized website service for contractors and local businesses that wants your site to be found by Google, ChatGPT, and Perplexity. It focuses on clear service messaging, structured data, AI chat agents, and dashboards that turn a website into a lead-capturing system instead of a static brochure. The workflow shown on the site covers auditing what search and AI tools can read, building a custom site, launching quickly, and then keeping it updated with monthly optimization.

What is 3engines

3engines is an AI-optimized website service built for contractors and local businesses that need more than a pretty homepage. The company positions the site as a working system: a site that can be read by search engines and AI assistants, answer common questions, and help capture leads. In other words, it is an AI-optimized website solution aimed at visibility, conversions, and ongoing improvement.

The homepage repeatedly emphasizes that the app is designed to be found by Google, ChatGPT, and Perplexity. That matters because 3engines is not just about design; it is about making a business understandable to both people and machine readers. The service appears to combine custom websites, an AI assistant, and dashboards that surface activity such as leads, response rates, load time, and citations.

It is especially focused on trades and local service businesses. The examples shown include demolition, excavation, grading, drainage, and home services, which suggests the system is tuned for companies that depend on local search and inbound quote requests.

Key features

3engines centers its offer around practical AI-optimized website components:

- Structured data on every page so search engines and AI tools can parse business details more clearly.
- llms.txt support, which the site describes as a file that tells AI which pages matter most.
- Semantic HTML and sitemap support for better crawlability and machine readability.
- FAQ schema to surface common questions in a structured format.
- An AI assistant trained on the business that can answer questions and capture leads around the clock.
- Real-time visibility into activity, including leads, conversations, and page visits.
- Monthly optimization and content updates so the site does not go stale.
- Migration support for businesses coming from WordPress, Wix, or Squarespace.

The AI-optimized website model is meant to help with discoverability across modern search channels, not just classic blue-link results. The site also claims the code is owned

How to use it

Using 3engines follows a four-step service flow shown on the site.

- Start with a free site review.
  - The audit checks structured data, search presence, crawler access, and content quality.
  - The page says no email is required for the review.
- Review the findings.
  - The audit output is framed around AI readiness.
  - It highlights items such as JSON-LD schema, llms.txt, semantic HTML, sitemap, robots.txt, and FAQ schema.
- Have the team design and build the new site.
  - The site is custom, not a template.
  - The build includes the AI optimization layer, the structured data layer, and the chat agent.
  - The page says this can take 2–3 weeks from start to finish.
- Launch and keep improving.
  - After launch, the AI assistant handles visitor questions, qualifying leads, and collecting contact details.
  - Ongoing monthly optimization is used to update content, monitor performance, and keep visibility growing.

For contractors and local businesses, the AI-optimized website workflow is designed to be simple: audit, build, launch, improve.

Who it is for

3engines is best suited for service businesses that rely on local leads and clear service-area messaging.

Good fits include:

- Home service businesses that want a site built around questions customers actually ask.
- Companies that already have a website but want to add AI visibility and lead capture.
- Businesses that want an AI assistant instead of a scripted chatbot.
- Owners who need dashboards showing live leads, chat activity, and site performance.

The AI-optimized website approach also makes sense for teams that compete in search results where clarity matters more than clever copy. The site specifically says businesses should explain what they do, where they do it, and why they are the right choice.

What to know before you use it

3engines makes strong claims about discoverability, but there are limits to what any AI-optimized website can guarantee. Search engines and AI assistants change their ranking and citation behavior frequently, so structured data and llms.txt can help, but they do not ensure placement or lead volume.

The audit language on the site suggests that many existing websites score poorly on machine readability, but that is a diagnostic, not a promise of results. If your business depends on exact compliance, licensing details, pricing, or regulated service claims, you should still verify those details on your official documents and not rely only on a website summary.

A few practical caveats:

- The site says the AI assistant is powered by Claude AI and customized with company knowledge, but you should expect AI output to need review for accuracy.
- Chat agents can qualify leads and answer common questions, but they do not replace human follow-up for complex jobs.
- Monthly optimization is part of the offer, so this is not a one-time build if you want the visibility work maintained.
- The public site does not clearly list pricing, so cost details are unknown from the harvested material.

For businesses that want an AI-optimized website to keep improving after launch, 3engines is a focused option. It is strongest when the goal is local discovery, lead capture, and clearer machine-readable content, and less useful if you only want a simple brochure site with no ongoing optimization. If your business needs to be found by both people and AI, this AI-optimized website service is built for that job.

FAQ

- What does 3engines do?
- What does 3engines actually build?
- Does 3engines only work with new websites?
- Does 3engines work with an existing website?
- How fast can a site be launched?
- How fast can a project launch?
- What is included in the monthly service?
- Is pricing listed on the website?
- Who is 3engines best for?
